

GW Industries is proud to introduce Micro Pro XP pressure treated plywood developed specifically for pontoon decking and aluminum boat floors.

Micro Pro XP panels are the first cost effective, arsenic free, treated plywood panels that exhibit corrosion rates similar to CCA treated and untreated plywood when in direct contact with metal. Micro Pro XP panels utilize a revolutionary MCA chemical formulation that contains less VOC's (volatile organic compounds) than MCQ, ACQ and other CCA alternatives.

In addition, the effectiveness of Micro Pro advanced MCA formulation provides a lifetime of protection at significantly lower minimum retention levels than alternative treatments. **This allows us to offer our arsenic free Micro Pro XP panels at the same cost as CCA treated plywood.**

Micro Pro XP Panel Construction

All panels utilize a 100% fir balanced construction to improve panel flatness. Faces are fully repaired and sanded providing an ideal surface ready for vinyl and carpet overlays. Core voids and gaps are significantly restricted to allow for proper fastener holding.

Warranty

Micro Pro XP panels are backed by a limited lifetime warranty against rot, manufacturing defects, and delamination. Our warranty covers panel replacement as well as associated labor costs.

Availability

GW Industries distributes Micro Pro XP panels in less-than-truckload and full truckload orders. We require minimal lead-times.

Experience

GW Industries has over 60 years of combined experience partnering with boat builders, plywood mills, and treating facilities to develop and distribute innovative, cost effective, quality plywood components for the marine industry.

For additional information regarding Micro Pro XP panels from GW Industries please contact us at 866-504-9095.

MicoPro XP pressure-preservative treated industrial plywood and lumber products from GW Industries.

MicroPro XP products are engineered specifically for aluminum boat, trailer, bus and truck body manufacturers that require pressure treated wood components that provide superior protection against fungal decay and termites.

MicroPro XP products utilize a revolutionary fully micronized copper plus tebuconazole co-biocide formulation. The MCA chemical formulation utilized in MicroPro XP lumber and plywood contain lower VOC's compared to MCQ, ACQ, and Copper Azole

MicroPro XP products from GW Industries offer many advantages to industrial applications.

- **Cost Savings...** MicroPro XP products are less expensive than ACQ, MCQ, and other environmental alternatives to CCA treated wood.
- **Performance...** MicroPro XP products exhibit corrosion rates that are significantly less than ACQ treated wood products.
- **Guaranteed Protection...** MicroPro XP products are backed by a lifetime warranty against rot and manufacturing defects.
- **Health...** MicroPro XP products do not contain arsenic.
- **Environmental...** MicroPro XP products contain lower VOC's compared to MCQ, ACQ, and Copper Azole.
- **Aesthetics...** MicroPro XP products have a natural "appearance grade" color.
- **FSC Certified...** Ask us about availability of FSC certified MicroPro XP products.

MicroPro XP Products meet all applicable major building codes for:

- Above Ground
- Ground Contact
- Fresh water immersion
- Salt water splash zone
- Severe critical structural applications in ground contact

GW Industries offers MicroPro XP plywood and lumber in a variety of sizes, and grades to meet specific industrial end-use applications. Call us to discuss your performance requirements.
